

PROMETHEUS VOICE

Your voice.
Action you can verify.

Marcus Comotti
AssemblyAI Voice Agent Hackathon

The problem: invisible actions

A spoken answer leaves practical questions.

What did the system actually do?

Did I authorize the camera?

Where did that result come from?

For builders and operators who need voice access with visible control.

How the prototype connects

AssemblyAI

Voice sessions, speech and spoken replies

PROMETHEUS VOICE

Tool handoffs, confirmation and the local interface

PROMETHEUS X6

Optional registry, information, telemetry and camera routes

Local calculator

Plan review, bounded arithmetic and evidence records

Camera capture with spoken consent

One request. A fresh confirmation. One capture.

Zhengchen conversation

Recent device conversation - clears after 3 minutes without new text.

You (Zhengchen): Hello, Prometheus.

Prometheus (Zhengchen): Hello. How can I help you?

You (Zhengchen): Can you take a picture?

Prometheus (Zhengchen): May I take one photo now and analyze it? Please say Yes, take the photo if you would like me to proceed.

You (Zhengchen): Yes, take the photo.

Prometheus (Zhengchen): The detector suggests there is one cup in the image.

The detector suggests a result; it does not establish certainty.

Sentinel observations through voice

8 aircraft targets

Filtered display count
within the configured area

25 weather cells

Recorded maximum: 2 mm
Freshness and source limits matter

Values shown belong to the recorded demonstration.

A local result with inspectable evidence

$$19 + 23 = 42$$

The user reviews the plan before execution.

The interface shows the result and its evidence receipt.

Voice handoff: No voice calculation requested

Objective: Calculate a bounded arithmetic result.

Policy: ALLOW · low risk

Reason: The bounded local operation is permitted by policy.

Plan: PROPOSED

Executor: local-calculator

Mode: REAL

local-calculator: REAL · ELIGIBLE

Success criteria: FINITE_NUMERIC_RESULT, MATCHES_REQUESTED_OPERATOR

Execute local calculation

Execution: EXECUTED

Reason: CALCULATION_COMPLETED

Result: 42

Executor: local-calculator

Evidence: VERIFIED

Trace: 76ec4491-6607-43c1-9e22-bd3811e39e33

Evidence record: 12

Receipt hash: cd617af9c73097c2e6f27ce641ca0ff73a1e92815d6a6aa065c614bcefe50e60

Hash-linked records check consistency, not independent attestation.

Implemented scope and next steps

Implemented

English voice interaction
Spoken camera confirmation
Sentinel and ShadowBroker queries
Capability registry reads
Human-reviewed local arithmetic

Next steps

Repeatable hardware setup
Longer reliability evaluation
Explicit service health reporting
More bounded action types

X6, firmware and external services remain separate dependencies.

Demo video and source code

github.com/comottimarcus-dot/prometheus-voice

Run the local arithmetic smoke test without credentials.
Voice requires AssemblyAI access. Hardware features require compatible external services.
